Education

Bachelor of Computer Engineering **Sep 2018 – May 2024**

Graduation Project:

- Developed and implemented a deep learning model to accurately measure the State of Health (SOH) of lithium-ion batteries.
- Utilized neural networks to analyze real-time data and predict battery performance degradation.
- Enhanced predictive maintenance capabilities.

Experience

Software Engineer – KraftxLab **December 2025 - Present**

- Developed and maintained full-stack web applications using modern frameworks and technologies.
- Designed and implemented embedded systems solutions, including firmware development and hardware-software integration.
- Configured and managed network infrastructure, including routing, switching, and security implementations.
- Built and deployed machine learning and AI models for data-driven applications and automation.
- Collaborated with cross-functional teams to deliver end-to-end technical solutions for clients.
- Participated in system architecture design, code reviews, and technical documentation.

IT Support Engineer – Meeza **November 2024 - December 2024**

- Completed a **2-month TechOps rotation** focused on firewall operations and connectivity troubleshooting.
- Assisted in monitoring network health, reviewing firewall policies, and processing access changes.
- Transitioned to IT Support, delivering technical assistance across systems, applications, and network services.
- Resolved over **5,000 ITSM tickets** while consistently meeting SLA targets.
- Handled **600+ advanced cases** involving VMs, system performance, and network issues.
- Supported Windows OS, Microsoft 365, VPN access, and enterprise applications.
- Managed Active Directory accounts, permissions, and group policy updates.
- Diagnosed hardware and software issues for desktops, laptops, and mobile devices.
- Escalated critical incidents to Tier 2/3 teams with clear technical documentation.
- Created knowledge base articles and maintained technical logs for process improvement.

Embedded Systems & 3D Design Intern, Voltaat **August 2024 - September 2024**

- Developed hardware and software solutions for embedded systems projects.
- Designed 3D models for custom enclosures and electronic components.
- Created prototypes using 3D printing to validate designs.
- Assisted in testing and debugging embedded systems to ensure functionality.

IT Business Analyst Intern, Applab **September 2024 - October 2024**

- Analyzed requirements for web development projects, including the Ministry of Social Development and Family (MSDF), Qatar Rail, and Qlife.
- Acted as a liaison between stakeholders and development teams to ensure clear communication of project needs.
- Coordinated with backend and frontend developers to implement website updates and enhancements.
- Ensured timely delivery of features while maintaining alignment with project goals and objectives.
- Identified opportunities to optimize user experience and improve system performance.
- Assisted in testing and validating new features before deployment to ensure functionality and quality.

Technical Skills and Interests

Programming languages: C++, Java, Python
Networks and Security: Networking, data security, cybersecurity
AI: Deep learning, Machine learning
Analytical Skills: Problem solving, Data analysis, optimization
Project Management: Leadership, Project delivery
Soft skills: Teamwork, Adaptability, Innovation

Certificates

CCNA (2021): Cisco Certified Network Associate
Qatar University Computing Club Outstanding Project Award, Robotics Track
In Progress: ISC2 SSCP (Systems Security Certified Practitioner)
In Progress: CCNP SCOR (350-701 Security Core)
In Progress: HTB Certified Defensive Security Analyst (CDSA)
